Newton is considered one of the greatest scientists who ever lived. Isaac Newton defined the laws of gravity, introduced a whole new branch of mathematics (calculus), and developed Newton's laws of motion. The three laws of movement were first found in a book published by Isaac Newton in 1687, Philosophiæ Naturalis Principia Mathematica (Mathematical Principals of Natural Philosophy). Newton used them to explain and study the movement of many physical objects and systems. For example, in the third volume of the text, Newton showed that these laws of movement, combined with his law of explained the laws of Kepler's planetary movement. Newton's laws of motion are three physical laws that together laid the foundation for classical mechanics. They describe the relationship between a body and the forces acting on it, and its movement in response to those forces. They have been expressed in many different ways, over nearly three centuries, and can be summarized as follows. Each body continues in its state of rest, or uniform movement in a straight line unless it is forced to change state by the forces impressed on it. The acceleration produced by a particular force acting on a body is directly proportional to the magnitude of the force and inversely proportional to the mass of the body. Every action always has an equal reaction; or, the mutual actions of two bodies on top of each other are always equal, and directed towards opposite parts. If you are a parent or teacher who wants to introduce your students to Sir Isaac Newton, the following printable worksheets can make a great addition to your study. You may also want to look at resources such as Isaac Newton and the Laws of Motion - This book is written in graphic novel format, making it much more attractive to students than a standard textbook. It tells how Isaac Newton developed the laws of motion and the law of universal gravitation. Force and Motion: An Illustrated Guide to Newton's Laws - Author Jason Zimba breaks with the traditional method of teaching the laws of movement by visually explaining them. The book is organized into seventeen short, well-sequenced lessons that are followed by problems for students to work with. Print out the PDF: Newton's Laws of Motion vocabulary sheet Help your students begin to familiarize themselves with Newton's laws of motion terms with this vocabulary spreadsheet. Students should use a dictionary or Internet to search for and define terms. They will then write each term on the white line next to its correct definition. Print PDF: Newton's Laws of Motion Word Search This word search puzzle will make a fun exam for students studying the laws of movement. Each related term can be found among the mixed letters in the puzzle. As they find each word, students should ensure that they remember its definition, referring to their completed vocabulary sheet if necessary. Print PDF: Newton's Laws of Motion Crossword Puzzle Use this motion crossword law as a low-key exam for students. Each clue describes a previously defined term related to Newton's laws of motion. Print PDF: Newton's Laws of Motion Alphabet Activity Young students can review the terms associated with Newton's laws of motion while practicing their alphabetical skills. Students must write each word in the word bank in the correct alphabetical order on the white lines provided. Print pdf: Newton's Laws of Motion Challenge Use this challenge worksheet as a simple quiz to see how students remember what they learned about Newton's laws of motion. Each description is followed by four multiple-choice options. Print PDF: Newton's Laws of Motion Draw and Write Page can use this print and write a page to complete a simple report on Newton's laws of motion. They should draw an image related to the laws of movement and use white lines to write on their drawing. Print PDF: Sir Isaac Newton's Birthplace Coloring Page Sir Issac Newton was born in Woolsthorpe, Lincolnshire, England. Use Use coloring page to encourage students to research a little more about the life of this famous physicist. Physicist.
